

THE ATTACHMENT TO YOUR DIMENSIONS

application :

Those forks are used, when heavy loads are handled and there is a need for smooth positioning of the forks.

The optimum movement of the forks is enabled by a state-of-the-art mounting and stabilising system of forks by different rollers and brackets.

technical characteristics :

- numerous models, cross sections, lengths and capacities on demand
- adaptable practically to all forklifttrucks with adequate counterpart
- all guiding parts are reinforced to take dynamic forces better like hits, shocks etc.

Options :

- smaller rollers for easier displacement of forks
- sliding pads (standard or reinforced) made of nylon
- additional wear zones
- forks for the handling of round goods like tubes, Coils etc.
(f. e. rounded fork shape)
- Ex-proofed
- Antislippage coating
- reinforced forks
