

FORK COATINGS

application :

- to avoid slippage of the load (f. e. metal on metal a. m. o.)
- securing the load handled

technical characteristics of PU coating **(PU=polyurethane):**

- Polyurethane 75 Shore thick 10 mm immersed into the forks blade und with lowered screws.
- good resistance against breaks and wear.
- welded drive-in protection at tip.

other coatings possible:
waterresistant, wooden, Polyamide...

technical characteristics of rubber coating :

- Rubber 60 Shore thick 10 mm and vulcanised in cold condition.
- good dumping and securing function for sensitive goods.
- usually at forks back
- also possible on forks blade (immersed and with drive-in protection at tip).

PU-coating

vulcanised rubber
